### Acknowledgements

We are very thankful to Ms. Debra Stevenson, Dr. Qamile Ramadani and Dr. Merita Shehu and all the AQH staff for providing overall support to the study. We warmly thank our local study coordinator Dr. Pranvera Krasniqi and Dr. Myvedete Tershnjaku from the National Institute of Public Health Kosovo for their commitment and support in the implementation and quality assurance of the study. We would also like to thank Ms. Fetije Huruglica, Ms. Fekrije Hasani and Mr. Srdjan Simonović who supported in collecting the data relevant for the sampling of the study. Further, we are grateful to Applicable Research Solutions and its staff for ensuring a smooth implementation of data collection and field supervision. Specifically we would like to highlight the excellent work from our data collectors. Lastly we would like to express our gratitude to all participants in our survey including facility managers, doctors and patients.

## 1 Background & Objectives

The Accessible Quality Healthcare (AQH) project in Kosovo is funded by the Swiss Agency for Development and Cooperation (SDC) and implemented by a Consortium comprising Swiss Tropical and Public Health Institute (Swiss TPH) and Save the Children. The overall goal of the AQH project is to ensure that the health of the population of Kosovo has improved, with strengthened healthcare providers and managers able to meet the needs of the patients (especially vulnerable groups), who are more aware of their rights and needs.

At the request of the Ministry of Health, the AQH project conducted the first national **facility-based Quality of Care (QoC) study** from August to October 2018.

The objective of the study was to measure the quality of care related to structural and procedural aspects, as well as selected outcomes, in Primary Health Care (PHC) in all 38 municipalities in Kosovo.

The specific objectives of this study were to provide PHC service providers with information to:

- Assess the quality of health services provided in several PHC centres in each municipality, including specific structural and procedural aspects.
- Allow comparison of different aspects of quality of care between all municipalities.
- Determine to what degree health providers have infrastructure and consumables available as outlined in the national PHC norms or, where these are unavailable, those outlined in WHO standards.
- Assess patient satisfaction with the services provided at PHC centres.

For this study we considered an operational definition of the quality of health services based on the concept of quality of care presented by Donabedian (1988, 1990), which has frequently been used in similar studies (Boller and Wyss et al., 2003; Matthys, 2013; Kiefer and Kadesha, 2015; Lechthaler, 2015; AQH, 2016). This is characterized by three dimensions:

1) <u>Structural attributes</u> - relate to the setting where health care is provided. These attributes mostly refer to the organizational structure, human and financial resources, as well as availability of technical resources such as clinical protocols and guidelines.

<u>2) Process attributes</u> - relate to the provider-client interaction, for example professional conduct and technical competence, as well as interpersonal relations/client satisfaction.

<u>3) Outcome attributes</u> - relate to the effect of care delivery on the health status of populations. Outcomes result from the structural and process attributes, for example, survival and recovery of patients or, more indirectly, patient satisfaction.

This operational definition is based on the assumption that the three dimensions are connected to each other and ultimately to service quality: good structure increases the likelihood of good processes and good process increases the likelihood of good outcomes, although outcomes are a consequence rather than a component of the quality of services.

## 2 Methodology

### 2.1 Study design

The QoC study is designed as a facility-based cross sectional survey to measure aspects of the quality of care of PHC service. It captures the overall quality of the facility infrastructure (structural aspects), the quality of provider-patient interactions (process aspects) and patient satisfaction after consultation (outcome). The study assesses quality of care provided to all patient groups but particularly focuses on patients with diabetes and hypertension.

The modules for the QoC survey are based on a mix of indicators from the WHO Service Availability and Readiness Assessment (SARA) and the "Tool to Improve Quality of Health Care" within the "ACCESS" program supported by the Novartis Foundation for Sustainable Development (2014), as relevant. The modules were adapted to the Kosovo local context thereby taking into consideration the national PHC norms or, where these are unavailable, the WHO norms established in the Package of Essential Non Communicable Diseases (NCDs) Interventions.

### 2.2 Study area & target population

The survey was implemented in all municipalities. The QoC survey targets PHC facilities in both rural and urban areas. During the survey data was collected at three different levels: 1) the health facility, 2) the health provider and 3) the patients.

### Inclusion criteria for the baseline assessment

Inclusion criteria for the <u>health facilities</u> were as follows:

- Main Family Medicine Centre (MFMC) or Family Medicine Centre (FMC)
- At least one medical doctor assigned to the facility for at least one day per week

Inclusion criteria for <u>health providers</u> of the selected facilities for provider-patient observations were:

- Doctors providing PHC services
- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)

Inclusion criteria for <u>patients</u> accessing the selected facilities and receiving consultation were:

- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)
- Accessing the facility to receive services either for themselves or their accompanying minors.

### 2.3 Sample size and sampling strategy

### Sampling of health facilities

We applied a random proportional-to-size sampling procedure for each of the domains assuming that the facilities will be allocated to urban and rural areas proportional to the size of

urban and rural populations in the region. The number of daily visits in June 2018 is considered a proxy of daily attendances.

### Sampling of providers for provider-client observations

<u>All</u> provider-patient consultations, for which informed consent could be obtained from the patient or their legal representative, were observed in each health facility "Provider" hereby only refers to medical doctors (see inclusion criteria). A healthcare provider could but did not have to be observed repeatedly.

### Sampling of patients for exit interviews

For the exit interviews, <u>all</u> patients that received care for themselves, or for a child in their care, at the facility were interviewed for the exit interview, provided they gave consent<sup>1</sup>. The patients included for exit interviews did not necessarily need to be the same as for the provider-patient observation (see inclusion criteria).

### 2.4 Data collection and analysis

### Data collection

Before data collection, relevant authorities, specifically Directors for Health and Social Welfare (DHSW), mayors as well as managers of all selected facilities in all surveyed Municipalities were informed about the study, its purpose and its schedule at a meeting hosted by the Ministry of Health on 5<sup>th</sup> July 2018.

The data collection team consisted of 23 data collectors, divided into 10 sub-teams. Most data collectors had a background in medical training and public health and previous survey experience. Each data collection team was assigned to a set of designated facilities where they conducted the assessments. The data collection teams were closely monitored by the local study coordinator and supervisors. Data collection in the field took place from 10 September 2018 until 05 October 2018.

The following procedures were followed at each facility:

- 1) Introduction of purpose and procedures of the survey to the targeted service providers.
- 2) Data collection
  - Starting with provider-patient observations and exit interviews with patients conducted at the facility.
  - Exit interviews with clients were conducted in an appropriate location ensuring privacy and confidentiality.
  - Structural attributes related to infrastructure and management were assessed after the consultation hours in the afternoon.

Data collection was performed electronically using the Open Data Kit (ODK)<sup>2</sup> software on tablets. During and after each day of data collection, the local study coordinator and the supervisors conducted quality assurance.

#### Data analysis

During the analysis of the obtained data, full confidentiality of respondents was assured. Data was analysed using Stata Statistical Software/SE v15.0.

Additive index: The overall scores were calculated as additive indices to indicate the achieved percentage score. For a certain set of questions, e.g. infection prevention and control measures the additive index counts the answers/criteria which were fulfilled or not fulfilled. Questions/criteria which are not applicable were not considered. The number of positive

<sup>&</sup>lt;sup>1</sup> Depending on the capacity of the data collectors.

<sup>&</sup>lt;sup>2</sup> Open Data Kit (ODK) is a free and open-source set of tools for mobile data collection solutions. https://opendatakit.org/

answers is then divided by the total of valid answers (ratio). This way a percentage score is obtained for **each patient**.

Example: For infection prevention and control measures we measured five different aspects. For the first patient none of the aspects we measured was relevant, e.g. no examinations were done.

For the second patient only two of the five aspects were relevant: hand washing before and after the examination. Both actions were not observed. Hence this person had two valid answers but did not achieve any score. So the percentage score achieved for this person was 0.

For the third patient all five actions related to infection prevention and control measures were relevant. However, none of the five actions were observed. So the percentage score is yet once more 0.

The fourth patient was examined and instruments were used. Thus three aspects were relevant, but only one aspect (disinfection of instruments) observed. Hence 1 out of 3 were achieved, translating to a percentage score of 33%.

For the fifth patient all five aspects were considered relevant and all were also adhered to by the doctor. Hence for this person a percentage score of 100% was achieved.

The average index **for the facility** for infection and prevention measures would be calculated as 133/4=33%

Patient	Washed hands before	Washed hands after	Disinfected instruments	used gloves as required	used mask as required	Number of valid answers	Number of positive answers	Ratio (positive/valid answers)
1	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a
2	no	no	n/a	n/a	n/a	2	0	0
3	no	no	no	no	no	5	0	0
4	no	no	yes	n/a	n/a	3	1	33
5	yes	yes	yes	yes	yes	5	5	100
	<u>.</u>	<u>.</u>		<u>.</u>		Facil	ity Score	133/4=33

Yes/no: as observed; n/a: action was not needed, e.g. no examination conducted

**95% - CI**: A 95% confidence interval (CI) is used to analyse the data presented in Tables 15 - 20 whereby the average is a range with an upper and lower number calculated from a sample. Because the true population average is unknown, this range describes possible values that the mean could be. If multiple samples were drawn from the same population and a 95% CI calculated for each sample, we would expect the population mean to be found within 95% of these CIs. CIs are sensitive to variability in the population (spread of values) and sample size. We could say: we are confident that the real value lies somewhere within this value range. A confidence interval cannot be estimated if there is only one observation or if there is no variation of values.

#### n: number of observations in the sample

**Rank**: The rank provides an indication on the position of the municipality related to certain aspects. In other words: how does the municipality perform in comparison to the other 37 municipalities. In case of ties (=municipalities achieving the same score) the average rank is calculated and assigned, e.g. achievement scores are for two facilities 90, then their potential ranks 8 and 9 and are taken together and divided by 2. This results in the rank 8.5. Hence there is no rank 8 or 9 assigned and the next municipality would be assigned the rank 10.

### 2.5 Limitations

### Sample size

The study was designed as a nationwide survey. Hence, in comparison to a census, only randomly selected facilities were included in the study. Due to the different sizes of the municipalities, but also the different utilization patterns in the different municipalities, some municipalities had more facilities included than others. Some of the municipalities had only the MFMC and 1 FMC included. This limits our ability to show possible wider variations in these municipalities.

In addition some facilities had only a few visits from patients on the day(s) of the survey. Thus the numbers of observations or exit interviews varies substantially between the facilities.

#### Interviewer bias

Interviewers were trained and received clear instructions on the data collection, nevertheless variations between interviewers cannot be completely ruled-out.

### **Clinical observations**

The observations protocols for diabetic and hypertensive patients were very detailed in comparison to other illnesses. Hence, this might partially explain achievement differences between those illnesses and all other.

### 2.6 Ethical considerations

Before the interviews and observations, participants were given an information leaflet and asked for their consent. For this, participants were informed that a) their participation is voluntary, b) they can withdraw from participation at any time without any consequences, c) non-participation will not have any negative effects. Participants were also informed how the data will be used and that confidentiality is ensured as no names or other identifying aspects will be collected.

Ethical clearance was obtained from the Kosovo Medical Chamber on 3<sup>rd</sup> of August, 2018 (Reference Number: 04/2018).

## 3 Results

### 3.1 Summary of results for municipality Gjakovë

### 3.1.1 Infrastructure

- Five facilities were part of the study.
- They covered a variable range of services, however, only FMC-3 Berkoc provided antenatal care and obstetrics.
- The infrastructure varies between the facilities. Two FMCs reported severe shortage of power and the MFMC has no functional communication equipment.
- Cleanliness and hygiene also vary between facilities, with safe disposal of infectious waste inadequate (MFMC, FMC-3 Berkoc, FMC-8 Skivjan) and missing essential disinfectants and antiseptics (MFMC, FMC-4 Orize, FMC-5 Ereniku).
- General information regarding opening hours, tariffs and phone numbers were not available in all five facilities however, all provided information on how patients could provide feedback and make complaints.
- Each facility has some items of equipment unavailable, or available and not functional.
- Specific items of equipment for gynaecological examination are largely unavailable, including at the MFMC.
- Several advanced equipment items are not available at the MFMC and in other facilities, where they are available, they were often found to be not functional.
- Equipment to assess and monitor child growth was absent.
- All facilities had some items of medication missing, and several items were not available in any of the 5 facilities. Medial products for patient testing were only found at the MFMC.

### 3.1.2 Clinical observation

- In total, 68 clinical observations were conducted (40 in MFMC, 12 in FMC-5 Ereniku, 8 in FMC-4 Orize, 4 in FMC-3 Berkoc and in FMC-8 Skivjan).
- The majority of patients consulted for medical issues other than diabetes or hypertension (38), 16 consulted for referral, 10 for hypertension and 4 for diabetes services.
- Scores for adherence to principles of taking patient history and physical examination, varied across all facilities.
- Infection prevention and control was not satisfactory in all facilities. The infection prevention and control scores indicate that in cases where infection prevention and control measures were needed, they were often not performed by the medical doctor.
- The MFMC achieved an overall score of 22% in the treatment of diabetes patients. Adherence to principles of history taking, physical examination and giving advice for diabetes patients need to be improved. The remaining facilities were not scored.
- The overall score for the treatment of patients with hypertension was low (17-35%) across all facilities. Adherence to principles of history taking, physical examination and giving advice for hypertension need to be improved.
- In terms of treating patients with medical problems other than hypertension and diabetes the FMC-4 Orize had the highest score (65.8%).
- Two facilities achieved very high scores for questioning the patient and taking the patient's history (93.8% in the FMC-4 Orize and 100% in the FMC-3 Berkoc).
- The score for patients who consulted for other medical reasons were better than those for diabetes and hypertension and varied between 42-66% across the facilities.

### 3.1.3 Exit Interviews

- A total of 48 patient interviews were conducted (31 at MFMC, 7 at FMC-5 Ereniku, 6 at FMC-4 Orize, and 2 in FMC-3 Berkoc and and FMC-8 Skivjan).
- 27 patients were women.
- In the FMC-3 Berkoc none of the patients had visited the health care facility in the last three months whereas in the other facilities over half of the patients had visited the facilities at least once in the last three months.
- All patients were either satisfied or very satisfied with their consultation.
- 25 patients had to pay for the services received and 24 of these received a receipt.

### 3.2 Detailed information on results

## **Appendix B: Questionnaire**

Quality of Care Assessment - Infrastructure Assessment	Answers
Interviewer_ID	
IMEI (International Mobile Equipment Identity)	
Date of interview	
Start time of interview	
Name of municipality	
Name of facility	
Oral consent given by interviewee	yes no
Which services do you provide at this facility?	
Which services do you provide at this facility :	
Family planning	yes
	no
Antenatal care	yes
	no
Obstetric and newborn care	yes
	no
Immunization	yes no
Child preventative and curative care	yes no
Adolescent health	yes no
Sexually transmitted infections	yes no
Tuberculosis	
	yes no
Non-communicable diseases	VAS
Non-communicable diseases	yes no
Surgery	yes
	no
Do you provide any outreach activities?	yes
	no
If yes, SPECIFY	
Do you have laboratory services?	yes
	no

Do you have X-ray facilities?	yes
	no
How many days of the working week is at least one doctor present to provide general primary health care services?	1-2 days per week
	3-4 days per week
	5 or more days per week
Facility infrastructure and overall cleanliness and maintenance	
The facility and immediate surroundings (facility yard, waiting area	yes
outside) are free from long grass, paper debris and solid waste.	no
The facility has a rubbich his which is properly used and not everflowing	
The facility has a rubbish bin which is properly used and not overflowing.	yes no
There is a designated waiting room for patients.	yes
	no
The current waiting area is mopped, free of dust, trash; dirt, spider webs,	yes
and generally tidy.	no
There is at least one designated consulting room for women.	yes
	no
There is at least one designated consulting room for children.	yes
	no
All examination room(s) ensure(s) privacy/confidentiality (door, window	yes
blind, curtain).	no
All examination rooms are mopped, free of dust, trash; dirt, spider webs,	yes
and the rooms are generally tidy.	no
All examination rooms are well illuminated.	1/00
All examination rooms are well liuminated.	yes
	no
The facility has electricity	yes
	no
During the past 7 working days, did you have any power cuts of more	yes
than 1 hour during opening hours.	no
Is there routinely a time of year when this facility has a severe shortage	yes
or lack of power?	no
If yes, SPECIFY:	
The facility has a functional generator	yes
The facility has a fatisficitial generator	no
If the health facility has a functional generator: is fuel available today for	yes
in the meaning had a remotional generator. Is rule available loady for	no
the generator?	10
the generator?	
	yes no

If yes, SPECIFY:	
Has the facility a functional communication equipment (functional landline telephone or cell phone) available (either private phone or facility phone)?	yes no
What type of phone do you have available?	private cell phone of staff
	cell phone of facility
	landline of facility
The facility has functional computer.	yes no
The facility has a functional printer.	yes no
The facility has internet access.	yes no
During the past 7 working days did you have internet for at least 1 hour every day?	yes no
The administration shelf is filed and in order.	yes no
Does the facility have a patient record system?	yes no
In which year was the patient record system introduced?	
Are there sufficient empty patient record cards available?	yes no
Are minimum hygiene and safety standards in the facility ensured?	
There is running water in the facility (out of the tap).	yes no
There is warm water available (out of the tap).	yes no
Is there routinely a time of year when this facility has a severe shortage or lack of water (out of the tap)?	yes no
If yes: In case there is a severe shortage or lack of water (out of the tap), where do you fetch water?	well (protected)
	bottled water
	water tank/storage
	other
If other, please SPECIFY:	

Functional washing points exist in examination rooms and/or entrance hall, and soap or hand disinfectants and water are available.       yes         Labelled containers for medical waste disposal are available in all required areas (e.g. examination rooms).       yes         The facility has adequate and safe disposal of sharps (sharps box/container).       yes         The facility has adequate and safe disposal of infectious waste.       yes         Infectious waste is temporary stored at a protected place.       yes         no       no         There is regular and appropriate collection for infectious waste.       yes         no       no         The facility has essential disinfectants and antiseptics.       yes         no       no         The facility has essential disinfectants and functional toilet for patients.       yes         no       no         The facility has at least one accessible and functional toilet for patients.       yes         no       no         The toilet(s) or latrine is clean.       yes         No       no         The toilet(s) or latrine is clean.       yes         no       no         The toilet(s) or latrine is clean.       yes         no       no         The toilet(s) or latrine is clean.       yes         no       no		1
Labelled containers for medical waste disposal are available in all required areas (e.g. examination rooms).yes noThe facility has adequate and safe disposal of sharps (sharps box/container).yes noThe facility has adequate and safe disposal of infectious waste.yes noInfectious waste is temporary stored at a protected place.yes noSharps waste is temporary stored at a protected place.yes noThere is regular and appropriate collection for infectious waste.yes noThe facility has essential disinfectants and antiseptics.yes noThe facility has chorine solution or other disinfectants to disinfect contaminated instruments in all required areas (e.g. in examination noms).yes noThe facility has at least one accessible and functional toilet for patients.yes noThe toilet(s) or latrine is clean.yes noA washing point is available near the toilet or latrine.yes noSoap and water are available at the washing point near toilet or latrine.yes noPublic accountabilityyes noAre the facility opening hours visibly displayed to the public?yes yes noAre the facility opening hours visibly displayed to the public?yes yes noLabeled contact phone number visibly displayed to the public?yes yes	Functional washing points exist in examination rooms and/or entrance	yes

IMEI (International Mobile Equipment Identity)         Date of interview         Start time of interview         Name of municipality         Name of facility         Good morning! My name is [NAME]. We are here on behalf of the Accessible Quality Healthcare Project funded by the Swiss Development Cooperation to conduct a survey of health facilities in our project area. The objective of this study is to assess the quality of health care services provided in health facilities. The Ministry of Health and the ethical review board has approved this study.         We would like to interview people who have today consulted the medical doctor for their own health issues or for a child. Your experiences are very important to improve aspects related to quality of care. Information collected from this interview/questionnaire will be used by Accessible Quality Healthcare Project. Summaries of findings
