Acknowledgements

We are very thankful to Ms. Debra Stevenson, Dr. Qamile Ramadani and Dr. Merita Shehu and all the AQH staff for providing overall support to the study. We warmly thank our local study coordinator Dr. Pranvera Krasniqi and Dr. Myvedete Tershnjaku from the National Institute of Public Health Kosovo for their commitment and support in the implementation and quality assurance of the study. We would also like to thank Ms. Fetije Huruglica, Ms. Fekrije Hasani and Mr. Srdjan Simonović who supported in collecting the data relevant for the sampling of the study. Further, we are grateful to Applicable Research Solutions and its staff for ensuring a smooth implementation of data collection and field supervision. Specifically we would like to highlight the excellent work from our data collectors. Lastly we would like to express our gratitude to all participants in our survey including facility managers, doctors and patients.

1 Background & Objectives

The Accessible Quality Healthcare (AQH) project in Kosovo is funded by the Swiss Agency for Development and Cooperation (SDC) and implemented by a Consortium comprising Swiss Tropical and Public Health Institute (Swiss TPH) and Save the Children. The overall goal of the AQH project is to ensure that the health of the population of Kosovo has improved, with strengthened healthcare providers and managers able to meet the needs of the patients (especially vulnerable groups), who are more aware of their rights and needs.

At the request of the Ministry of Health, the AQH project conducted the first national **facility-based Quality of Care (QoC) study** from August to October 2018.

The objective of the study was to measure the quality of care related to structural and procedural aspects, as well as selected outcomes, in Primary Health Care (PHC) in all 38 municipalities in Kosovo.

The specific objectives of this study were to provide PHC service providers with information to:

- Assess the quality of health services provided in several PHC centres in each municipality, including specific structural and procedural aspects.
- Allow comparison of different aspects of quality of care between all municipalities.
- Determine to what degree health providers have infrastructure and consumables available as outlined in the national PHC norms or, where these are unavailable, those outlined in WHO standards.
- Assess patient satisfaction with the services provided at PHC centres.

For this study we considered an operational definition of the quality of health services based on the concept of quality of care presented by Donabedian (1988, 1990), which has frequently been used in similar studies (Boller and Wyss et al., 2003; Matthys, 2013; Kiefer and Kadesha, 2015; Lechthaler, 2015; AQH, 2016). This is characterized by three dimensions:

- 1) <u>Structural attributes</u> relate to the setting where health care is provided. These attributes mostly refer to the organizational structure, human and financial resources, as well as availability of technical resources such as clinical protocols and guidelines.
- <u>2) Process attributes</u> relate to the provider-client interaction, for example professional conduct and technical competence, as well as interpersonal relations/client satisfaction.
- 3) Outcome attributes relate to the effect of care delivery on the health status of populations. Outcomes result from the structural and process attributes, for example, survival and recovery of patients or, more indirectly, patient satisfaction.

This operational definition is based on the assumption that the three dimensions are connected to each other and ultimately to service quality: good structure increases the likelihood of good processes and good process increases the likelihood of good outcomes, although outcomes are a consequence rather than a component of the quality of services.

2 Methodology

2.1 Study design

The QoC study is designed as a facility-based cross sectional survey to measure aspects of the quality of care of PHC service. It captures the overall quality of the facility infrastructure (structural aspects), the quality of provider-patient interactions (process aspects) and patient satisfaction after consultation (outcome). The study assesses quality of care provided to all patient groups but particularly focuses on patients with diabetes and hypertension.

The modules for the QoC survey are based on a mix of indicators from the WHO Service Availability and Readiness Assessment (SARA) and the "Tool to Improve Quality of Health Care" within the "ACCESS" program supported by the Novartis Foundation for Sustainable Development (2014), as relevant. The modules were adapted to the Kosovo local context thereby taking into consideration the national PHC norms or, where these are unavailable, the WHO norms established in the Package of Essential Non Communicable Diseases (NCDs) Interventions.

2.2 Study area & target population

The survey was implemented in all municipalities. The QoC survey targets PHC facilities in both rural and urban areas. During the survey data was collected at three different levels: 1) the health facility, 2) the health provider and 3) the patients.

Inclusion criteria for the baseline assessment

Inclusion criteria for the health facilities were as follows:

- Main Family Medicine Centre (MFMC) or Family Medicine Centre (FMC)
- At least one medical doctor assigned to the facility for at least one day per week

Inclusion criteria for <u>health providers</u> of the selected facilities for provider-patient observations were:

- Doctors providing PHC services
- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)

Inclusion criteria for patients accessing the selected facilities and receiving consultation were:

- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)
- Accessing the facility to receive services either for themselves or their accompanying minors.

2.3 Sample size and sampling strategy

Sampling of health facilities

We applied a random proportional-to-size sampling procedure for each of the domains assuming that the facilities will be allocated to urban and rural areas proportional to the size of

urban and rural populations in the region. The number of daily visits in June 2018 is considered a proxy of daily attendances.

Sampling of providers for provider-client observations

<u>All</u> provider-patient consultations, for which informed consent could be obtained from the patient or their legal representative, were observed in each health facility "Provider" hereby only refers to medical doctors (see inclusion criteria). A healthcare provider could but did not have to be observed repeatedly.

Sampling of patients for exit interviews

For the exit interviews, <u>all</u> patients that received care for themselves, or for a child in their care, at the facility were interviewed for the exit interview, provided they gave consent¹. The patients included for exit interviews did not necessarily need to be the same as for the provider-patient observation (see inclusion criteria).

2.4 Data collection and analysis

Data collection

Before data collection, relevant authorities, specifically Directors for Health and Social Welfare (DHSW), mayors as well as managers of all selected facilities in all surveyed Municipalities were informed about the study, its purpose and its schedule at a meeting hosted by the Ministry of Health on 5th July 2018.

The data collection team consisted of 23 data collectors, divided into 10 sub-teams. Most data collectors had a background in medical training and public health and previous survey experience. Each data collection team was assigned to a set of designated facilities where they conducted the assessments. The data collection teams were closely monitored by the local study coordinator and supervisors. Data collection in the field took place from 10 September 2018 until 05 October 2018.

The following procedures were followed at each facility:

- 1) Introduction of purpose and procedures of the survey to the targeted service providers.
- 2) Data collection
 - Starting with provider-patient observations and exit interviews with patients conducted at the facility.
 - Exit interviews with clients were conducted in an appropriate location ensuring privacy and confidentiality.
 - Structural attributes related to infrastructure and management were assessed after the consultation hours in the afternoon.

Data collection was performed electronically using the Open Data Kit (ODK)² software on tablets. During and after each day of data collection, the local study coordinator and the supervisors conducted quality assurance.

Data analysis

During the analysis of the obtained data, full confidentiality of respondents was assured. Data was analysed using Stata Statistical Software/SE v15.0.

Additive index: The overall scores were calculated as additive indices to indicate the achieved percentage score. For a certain set of questions, e.g. infection prevention and control measures the additive index counts the answers/criteria which were fulfilled or not fulfilled. Questions/criteria which are not applicable were not considered. The number of positive

¹ Depending on the capacity of the data collectors.

² Open Data Kit (ODK) is a free and open-source set of tools for mobile data collection solutions. https://opendatakit.org/

answers is then divided by the total of valid answers (ratio). This way a percentage score is obtained for **each patient**.

Example: For infection prevention and control measures we measured five different aspects. For the first patient none of the aspects we measured was relevant, e.g. no examinations were done.

For the second patient only two of the five aspects were relevant: hand washing before and after the examination. Both actions were not observed. Hence this person had two valid answers but did not achieve any score. So the percentage score achieved for this person was 0.

For the third patient all five actions related to infection prevention and control measures were relevant. However, none of the five actions were observed. So the percentage score is yet once more 0.

The fourth patient was examined and instruments were used. Thus three aspects were relevant, but only one aspect (disinfection of instruments) observed. Hence 1 out of 3 were achieved, translating to a percentage score of 33%.

For the fifth patient all five aspects were considered relevant and all were also adhered to by the doctor. Hence for this person a percentage score of 100% was achieved.

The average index **for the facility** for infection and prevention measures would be calculated as 133/4=33%

Patient	Washed hands before	Washed hands after	Disinfected instruments	used gloves as required	used mask as required	Number of valid answers	Number of positive answers	Ratio (positive/valid answers)
1	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a
2	no	no	n/a	n/a	n/a	2	0	0
3	no	no	no	no	no	5	0	0
4	no	no	yes	n/a	n/a	3	1	33
5	yes	yes	yes	yes	yes	5	5	100
						Facil	ity Score	133/4=33

Yes/no: as observed; n/a: action was not needed, e.g. no examination conducted

95% - CI: A 95% confidence interval (CI) is used to analyse the data presented in Tables 15 - 20 whereby the average is a range with an upper and lower number calculated from a sample. Because the true population average is unknown, this range describes possible values that the mean could be. If multiple samples were drawn from the same population and a 95% CI calculated for each sample, we would expect the population mean to be found within 95% of these CIs. CIs are sensitive to variability in the population (spread of values) and sample size. We could say: we are confident that the real value lies somewhere within this value range. A confidence interval cannot be estimated if there is only one observation or if there is no variation of values.

n: number of observations in the sample

Rank: The rank provides an indication on the position of the municipality related to certain aspects. In other words: how does the municipality perform in comparison to the other 37 municipalities. In case of ties (=municipalities achieving the same score) the average rank is calculated and assigned, e.g. achievement scores are for two facilities 90, then their potential ranks 8 and 9 and are taken together and divided by 2. This results in the rank 8.5. Hence there is no rank 8 or 9 assigned and the next municipality would be assigned the rank 10.

2.5 Limitations

Sample size

The study was designed as a nationwide survey. Hence, in comparison to a census, only randomly selected facilities were included in the study. Due to the different sizes of the municipalities, but also the different utilization patterns in the different municipalities, some municipalities had more facilities included than others. Some of the municipalities had only the MFMC and 1 FMC included. This limits our ability to show possible wider variations in these municipalities.

In addition some facilities had only a few visits from patients on the day(s) of the survey. Thus the numbers of observations or exit interviews varies substantially between the facilities.

Interviewer bias

Interviewers were trained and received clear instructions on the data collection, nevertheless variations between interviewers cannot be completely ruled-out.

Clinical observations

The observations protocols for diabetic and hypertensive patients were very detailed in comparison to other illnesses. Hence, this might partially explain achievement differences between those illnesses and all other.

2.6 Ethical considerations

Before the interviews and observations, participants were given an information leaflet and asked for their consent. For this, participants were informed that a) their participation is voluntary, b) they can withdraw from participation at any time without any consequences, c) non-participation will not have any negative effects. Participants were also informed how the data will be used and that confidentiality is ensured as no names or other identifying aspects will be collected.

Ethical clearance was obtained from the Kosovo Medical Chamber on 3rd of August, 2018 (Reference Number: 04/2018).

3 Results

3.1 Summary of results for Peja municipality

3.1.1 Infrastructure

- Three facilities were part of the study (MFMC, FMC Vitomirice, FMC IV Dardani).
- At the MFMC all services were available, whereas at FMCs many services were unavailable.
- Overall, the facility infrastructure and maintenance were good, specifically the cleanliness.
- The MFMC and FMC Vitomirice lacked a patient record system.
- Items for public accountability were with a few exceptions overall visible in all facilities.
- The MFMC also had guidelines and information materials readily available, with more variation in the FMCs.
- None of the facilities had all general medical equipment available. Gynaecological service equipment was ready in the MFMC and FMC - Vitomirice but not in FMC - IV Dardani.
- The MFMC was better equipped with advanced equipment than the FMCs. FMC Dardani contained the least advanced equipment.
- As one of the few facilities the MFMC has some equipment to assess and monitor child growth.
- Many medical products were not available in all three facilities.
- None of the facilities provide tuberculosis and X Ray services.

3.1.2 Clinical observation

- In total, 87 clinical observations were conducted (61 at the MFMC, 15 at the FMC Vitomirice, 11 at the FMC IV Dardani).
- The majority (54) of patients consulted for other medical issues.
- Three patients consulted for hypertension.
- Adherence to principles of patient history taking and physical examination was good in all three facilities and there was little variation. Indicating that across the different patients the doctor adhered to the majority of aspects that were checked, e.g. greeting the patient, seeing the patient in privacy, etc.
- Infection prevention and control was not very satisfactory in all three facilities. The scores indicate that in cases where infection prevention and control measures were needed, they were often not performed.
- Achievement levels related to treatment of patients with hypertension was rather low, however, only three clinical observations were conducted.
- Level of achievement for reasons other than diabetes or hypertension was high with 82% for the MFMC, 89% for the FMC Vitomirice and 96% for the FMC IV Dardani.
- Referrals vary between the MFMC (38%) and both FMCs (27%).

3.1.3 Exit Interviews

- In total, 43 patients (22 women) were interviewed.
- The majority of patients were very satisfied with the services they had received.
- One patient, out of 15, who had to pay for the service had not received a receipt.

3.2 Detailed information on results

Lipid profile	no	no	no
Serum creatinine assay	yes	no	no

3.2.4 Clinical Observations

Table 14 Clinical observations overview table

	MFMC % (n=61)	FMC - Vitomirice % (n=15)	FMC - IV Dardani % (n=11)
Number of observations (patients)	100%	100%	100%
- women	64% (39)	80% (12)	64% (7)
Observations by type of doctors		-	
- Family Medical Specialist	66% (40)	73% (11)	100% (11)
- General Practitioner	33% (20)	0% (0)	0% (0)
- Other Specialist	2% (1)	27% (4)	0% (0)
Age of patient			
- <5	0% (0)	0% (0)	0% (0)
- 5 - 18	0% (0)	0% (0)	18% (2)
- 19 - 49	51% (31)	33% (5)	36% (4)
- 50 - 65	25% (15)	27% (4)	9% (1)
- >65	25% (15)	40% (6)	36% (4)
Reason for visit		•	
- Hypertension	3% (2)	0% (0)	9% (1)
- Diabetes	0% (0)	0% (0)	0% (0)
- Other	59% (36)	73% (11)	64% (7)
-Referral	38% (23)	27% (4)	27% (3)

Table 15 Adherence to principles of history and physical examination

	MFMC (n=61)	FMC - Vitomirice (n=15)	FMC - IV Dardani (n=11)
The medical doctor adheres to principles of history and physical examination, i.e Greets the client Sees the client in privacy/confidentiality Makes the client comfortable (e.g. Seat offered) Asks the client about concerns, allows client to explain his/her health issue Has the patient record Uses the patient record during consultation Documents consultation in patient record (of all who have the patient record) Closed politely the consultation	80% (78% -	83% (Not	86% (82% -
	82%)	available)	90%)

Table 16 Infection prevention and control

	MFMC (n=61)	FMC - Vitomirice (n=15)	FMC - IV Dardani (n=11)
The medical doctor pays attention to infection prevention and control, i.e - Washes hands before the procedure - Washes hands after procedure - Applied proper decontamination procedures - Puts on gloves where required - Puts on a mask where required	0% (Not	0% (Not	0% (Not
	available)	available)	available)

Table 17 Patients with diabetes

Diabetes	MFMC (n=0)	FMC - Vitomirice (n=0)	FMC - IV Dardani (n=0)
The medical doctor			
Asks questions, about - Any specific health complaints - General weakness - Urine discharge - Vulvovaginitis or pruritus - Appetite - Eye-sight - Visit to opthalmalogist - Alcohol - Smoking - Using other medicine - Sedentary way of life - Adherence with diabetes treatment (if applicable)	Not applicable	Not applicable	Not applicable
Conducts examinations, i.e - Checks blood pressure - Weight measurement / calculation of body-mass index - Of skin, mucus membranes, nodes of lymph, ears, nose, thyroid glands - Of eyes - Of chest, auscultation of lungs - Auscultation of heart - Of abdomen, palpation of liver and signs of percussion - Perfusion of legs (veins and feeling of legs) - And gives clear explanations to the client concerning the purpose of tests and procedures.	Not applicable	Not applicable	Not applicable
Advices, explains and instructs, about Results of examinations The situation and diagnosis The prognosis About needed examinations - Nutrition, i.e. Food intake and weight decrease On the prevention and treatment of hypoglycaemia and other acute and chronic complications of diabetes On self-monitoring - glycemia control and prevention of hypoglycaemia About alcohol About smoking About physical exercise Right ways of care of legs Potential complication of the illness Potential risks if illness is not treated Importance of adherence to treatment About follow-up visit About the referral (if applicable) On prescribed medicines/treatment (if applicable)	Not applicable	Not applicable	Not applicable
Overall Score	Not applicable	Not applicable	Not applicable

Table 18 Patients with hypertension

Table 18 Patients with hypertension				
Hypertension	MFMC (n=2)	FMC - Vitomirice (n=0)	FMC - IV Dardani (n=1)	
The medical doctor				
Asks questions, about - Any specific health complaints - Headache - The use of medicine other than for hypertension - The use of contraceptives - Eye-sight - Visit to ophthalmologist - Alcohol - Smoking - Sedentary way of life - High blood pressure (if applicable) - Adherence with hypertension treatment (if applicable)	23% (0% - 68%)	Not applicable	46% (Not available)	
Conducts examinations, i.e - Checks blood pressure - Weight measurement / calculation of body-mass index - Of skin, mucus membranes, nodes of lymph, ears, nose, thyroid glands - Of eyes - Of chest, auscultation of lungs - Auscultation of heart - Of abdomen, palpation of liver and signs of percussion, palpation of kidneys - Perfusion of legs (pulse and perfusion of legs) - And gives clear explanations to the client concerning the purpose of tests and procedures. Checks blood pressure	39% (6% - 72%)	Not applicable	67% (Not available)	
Advices, explains and instructs, about Results of examinations The situation and diagnosis The prognosis About needed examinations About signs of extreme hypertension About what to do when signs of extreme hypertension occur Nutrition, i.e. food intake About alcohol About smoking About physical exercise About oral contraceptives Potential complication of the illness Potential risks if illness is not treated Importance of adherence to treatment About follow-up visit About the referral (if applicable) On prescribed medicines/treatment (if applicable)	35% (0% - 100%)	Not applicable	56% (Not available)	
Overall Score	33% (0% -86%)	Not applicable	56% (Not available)	

Table 19 Patients consulting for other reasons than diabetes or hypertension

Other diseases	MFMC (n=36)	FMC - Vitomirice (n=11)	FMC - IV Dardani (n=7)
The medical doctor		•	•
Asks questions, about - Takes patient history (general history, specific to disease) - Asks open ended questions during history taking - Asks about any prescriptions the client is currently taking. - Listens to the client and responds to client questions.	94% (91% -	100% (not	100% (not
	98%)	available)	available)
Conducts examinations, i.e Performs medical examinations and other investigations as individually required Gives clear explanations to the patient concerning the purpose of medical examinations and other investigations.	90% (78% -	100% (not	100% (not
	100%)	available)	available)
Advices, explains and instructs, about - Results of examinations - The situation and diagnosis - The prognosis - About needed examinations - About follow-up visit - About the referral (if applicable) - On prescribed medicines/treatment (if applicable) - On risks factors/health education (if applicable)	73% (66% -	81% (75% -	94% (88% -
	79%)	87%)	100%)
Overall Score	82% (78% -	89% (86% -	97% (93% -
	87%)	93%)	100%)

Table 20 Patients consulting for referrals

Referrals	MFMC (n=23)	FMC - Vitomirice (n=4)	FMC - IV Dardani (n=3)
The medical doctor			
Asks questions, about - Takes patient history (general history, specific to disease) - Asks open ended questions during history taking - Asks about any prescriptions the client is currently taking. - Listens to the client and responds to client questions.	63% (49% -	81% (69% -	100% (not
	77%)	94%)	available)
Conducts examinations, i.e Performs medical examinations and other investigations as individually required Gives clear explanations to the patient concerning the purpose of medical examinations and other investigations.	20% (0% – 59%)	67% (1% - 100%)	Not applicable
Advices, explains and instructs, about Results of examinations - The situation and diagnosis - The prognosis - About needed examinations - About follow-up visit - About the referral (if applicable) - On prescribed medicines/treatment (if applicable) - On risks factors/health education (if applicable)	33% (21% -	51% (39% -	77% (48% -

Economic or social aid	40% (12)	29% (2)	50% (3)

Table 22 Frequency and reason of visit of exit interviews

	MFMC % (n)	FMC - Vitomirice % (n)	FMC - IV Dardani % (n)
Excluding today: how often did you access this HC over	the past 3 month?		
- Did not access this HC in the past 3 months	47% (14)	57% (4)	17% (1)
- 1-3 times	37% (11)	14% (1)	67% (4)
- More than 3 times	17% (5)	29% (2)	17% (1)
What was the reason for your consultation today?			
- Chronic condition	37% (11)	29% (2)	0% (0)
- Antenatal care	0% (0)	0% (0)	0% (0)
- Child health	0% (0)	29% (2)	17% (1)
- Immunisation	0% (0)	0% (0)	0% (0)
- Other	63% (19)	43% (3)	83% (5)

Table 23 Overall satisfaction with health services - exit interviews

	MFMC % (n)	FMC - Vitomirice % (n)	FMC - IV Dardani % (n)
Overall: How satisfied were you with the services you re	eceived today		
Very unsatisfied	3% (1)	0% (0)	0% (0)
Unsatisfied	3% (1)	0% (0)	0% (0)
Satisfied	33% (10)	0% (0)	33% (2)
Very satisfied	60% (18)	100% (7)	67% (4)

Table 24 Satisfaction with different aspects of health service - exit interviews

	MFMC % (n)	FMC - Vitomirice % (n)	FMC - IV Dardani % (n)
Patient was given the opportunity to explain the health problem	100% (30)	100% (7)	100% (6)
Patients privacy was ensured	97% (29)	100% (7)	100% (6)
Doctor explained the questioning and physical examinations and the health problem*	96% (24)	100% (6)	100% (5)
Doctor explained the intake of prescribed medicine**	88% (15)	83% (5)	100% (3)
Doctor asked if patient currently takes prescriptions	73% (22)	100% (7)	100% (6)
Patient was given chance to ask questions about the investigation, health problem and treatment	97% (29)	100% (7)	100% (6)
Doctor listened carefully to patients concerns and questions and gave satisfactory answers	97% (29)	100% (7)	100% (6)
Patient got advice on health problem	77% (23)	100% (7)	100% (6)
Medical doctor was polite during consultation	100% (30)	100% (7)	100% (6)

^{*} relevant only when examination was conducted; ** only relevant if medicine were prescribed

Table 25 Payment for health service - exit interviews

	MFMC % (n)	FMC - Vitomirice % (n)	FMC - IV Dardani % (n)
Did you pay today for your health consultation?	37% (11)	29% (2)	33% (2)
Did you get a receipt for your payment?	91% (10)	100% (2)	100% (2)

Interviewer_ID IMEI (International Mobile Equipment Identity) Date of interview Start time of interview Name of municipality Name of facility Good morning! My name is [NAME]. We are here on behalf of the Accessible Quality Healthcare Project funded by the Swiss Development Cooperation to conduct a survey of health facilities in our project area. The objective of this study is to assess the quality of health care services provided in health facilities. The Ministry of Health and the ethical review board has approved this study. We would like to interview people who have today consulted the medical doctor for their own health issues or for a child. Your experiences are very important to improve aspects related to quality of care. Information collected from this interview/questionnaire will be used by Accessible Quality Healthcare Project. Summaries of findings	Answers

Have you been here today for issues related to your own health or the one of a child (child must be with the person)?	yes no
Socio-demographic information	
Patients' gender	female
ratients gender	male
Year of birth	
Mother/father/caretaker older 18 with child (child is patient)	yes no
Satisfaction with health service	
	very unsatisfied
Overall: How entirfied were you with the convices you received today?	unsatisfied
Overall: How satisfied were you with the services you received today?	satisfied
	very satisfied
Received services	
Excluding today: How often did you over the past 3 month access this	did not access this HC in the past 3 months
HC?	1-3 times
	more than 3 times
	chronic condition
	antenatal care
What was the reason for your consultation today?	child health
	immunisation
	other
	conduct an examination
	write you a prescription
Did the medical doctor	Other
	Curci
Aspects of todays consultation
