Acknowledgements

We are very thankful to Ms. Debra Stevenson, Dr. Qamile Ramadani and Dr. Merita Shehu and all the AQH staff for providing overall support to the study. We warmly thank our local study coordinator Dr. Pranvera Krasniqi and Dr. Myvedete Tershnjaku from the National Institute of Public Health Kosovo for their commitment and support in the implementation and quality assurance of the study. We would also like to thank Ms. Fetije Huruglica, Ms. Fekrije Hasani and Mr. Srdjan Simonović who supported in collecting the data relevant for the sampling of the study. Further, we are grateful to Applicable Research Solutions and its staff for ensuring a smooth implementation of data collection and field supervision. Specifically we would like to highlight the excellent work from our data collectors. Lastly we would like to express our gratitude to all participants in our survey including facility managers, doctors and patients.

1 Background & Objectives

The Accessible Quality Healthcare (AQH) project in Kosovo is funded by the Swiss Agency for Development and Cooperation (SDC) and implemented by a Consortium comprising Swiss Tropical and Public Health Institute (Swiss TPH) and Save the Children. The overall goal of the AQH project is to ensure that the health of the population of Kosovo has improved, with strengthened healthcare providers and managers able to meet the needs of the patients (especially vulnerable groups), who are more aware of their rights and needs.

At the request of the Ministry of Health, the AQH project conducted the first national **facility-based Quality of Care (QoC) study** from August to October 2018.

The objective of the study was to measure the quality of care related to structural and procedural aspects, as well as selected outcomes, in Primary Health Care (PHC) in all 38 municipalities in Kosovo.

The specific objectives of this study were to provide PHC service providers with information to:

- Assess the quality of health services provided in several PHC centres in each municipality, including specific structural and procedural aspects.
- Allow comparison of different aspects of quality of care between all municipalities.
- Determine to what degree health providers have infrastructure and consumables available as outlined in the national PHC norms or, where these are unavailable, those outlined in WHO standards.
- Assess patient satisfaction with the services provided at PHC centres.

For this study we considered an operational definition of the quality of health services based on the concept of quality of care presented by Donabedian (1988, 1990), which has frequently been used in similar studies (Boller and Wyss et al., 2003; Matthys, 2013; Kiefer and Kadesha, 2015; Lechthaler, 2015; AQH, 2016). This is characterized by three dimensions:

- 1) <u>Structural attributes</u> relate to the setting where health care is provided. These attributes mostly refer to the organizational structure, human and financial resources, as well as availability of technical resources such as clinical protocols and guidelines.
- <u>2) Process attributes</u> relate to the provider-client interaction, for example professional conduct and technical competence, as well as interpersonal relations/client satisfaction.
- 3) Outcome attributes relate to the effect of care delivery on the health status of populations. Outcomes result from the structural and process attributes, for example, survival and recovery of patients or, more indirectly, patient satisfaction.

This operational definition is based on the assumption that the three dimensions are connected to each other and ultimately to service quality: good structure increases the likelihood of good processes and good process increases the likelihood of good outcomes, although outcomes are a consequence rather than a component of the quality of services.

2 Methodology

2.1 Study design

The QoC study is designed as a facility-based cross sectional survey to measure aspects of the quality of care of PHC service. It captures the overall quality of the facility infrastructure (structural aspects), the quality of provider-patient interactions (process aspects) and patient satisfaction after consultation (outcome). The study assesses quality of care provided to all patient groups but particularly focuses on patients with diabetes and hypertension.

The modules for the QoC survey are based on a mix of indicators from the WHO Service Availability and Readiness Assessment (SARA) and the "Tool to Improve Quality of Health Care" within the "ACCESS" program supported by the Novartis Foundation for Sustainable Development (2014), as relevant. The modules were adapted to the Kosovo local context thereby taking into consideration the national PHC norms or, where these are unavailable, the WHO norms established in the Package of Essential Non Communicable Diseases (NCDs) Interventions.

2.2 Study area & target population

The survey was implemented in all municipalities. The QoC survey targets PHC facilities in both rural and urban areas. During the survey data was collected at three different levels: 1) the health facility, 2) the health provider and 3) the patients.

Inclusion criteria for the baseline assessment

Inclusion criteria for the health facilities were as follows:

- Main Family Medicine Centre (MFMC) or Family Medicine Centre (FMC)
- At least one medical doctor assigned to the facility for at least one day per week

Inclusion criteria for <u>health providers</u> of the selected facilities for provider-patient observations were:

- Doctors providing PHC services
- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)

Inclusion criteria for patients accessing the selected facilities and receiving consultation were:

- Patients (18 years or older, or children accompanied by a legal representative) accessing the facility and receiving a consultation from a health provider
- Oral informed consent provided by the patient or his/her legal representative (mother/father/caretaker)
- Accessing the facility to receive services either for themselves or their accompanying minors.

2.3 Sample size and sampling strategy

Sampling of health facilities

We applied a random proportional-to-size sampling procedure for each of the domains assuming that the facilities will be allocated to urban and rural areas proportional to the size of

urban and rural populations in the region. The number of daily visits in June 2018 is considered a proxy of daily attendances.

Sampling of providers for provider-client observations

<u>All</u> provider-patient consultations, for which informed consent could be obtained from the patient or their legal representative, were observed in each health facility "Provider" hereby only refers to medical doctors (see inclusion criteria). A healthcare provider could but did not have to be observed repeatedly.

Sampling of patients for exit interviews

For the exit interviews, <u>all</u> patients that received care for themselves, or for a child in their care, at the facility were interviewed for the exit interview, provided they gave consent¹. The patients included for exit interviews did not necessarily need to be the same as for the provider-patient observation (see inclusion criteria).

2.4 Data collection and analysis

Data collection

Before data collection, relevant authorities, specifically Directors for Health and Social Welfare (DHSW), mayors as well as managers of all selected facilities in all surveyed Municipalities were informed about the study, its purpose and its schedule at a meeting hosted by the Ministry of Health on 5th July 2018.

The data collection team consisted of 23 data collectors, divided into 10 sub-teams. Most data collectors had a background in medical training and public health and previous survey experience. Each data collection team was assigned to a set of designated facilities where they conducted the assessments. The data collection teams were closely monitored by the local study coordinator and supervisors. Data collection in the field took place from 10 September 2018 until 05 October 2018.

The following procedures were followed at each facility:

- 1) Introduction of purpose and procedures of the survey to the targeted service providers.
- 2) Data collection
 - Starting with provider-patient observations and exit interviews with patients conducted at the facility.
 - Exit interviews with clients were conducted in an appropriate location ensuring privacy and confidentiality.
 - Structural attributes related to infrastructure and management were assessed after the consultation hours in the afternoon.

Data collection was performed electronically using the Open Data Kit (ODK)² software on tablets. During and after each day of data collection, the local study coordinator and the supervisors conducted quality assurance.

Data analysis

During the analysis of the obtained data, full confidentiality of respondents was assured. Data was analysed using Stata Statistical Software/SE v15.0.

Additive index: The overall scores were calculated as additive indices to indicate the achieved percentage score. For a certain set of questions, e.g. infection prevention and control measures the additive index counts the answers/criteria which were fulfilled or not fulfilled. Questions/criteria which are not applicable were not considered. The number of positive

¹ Depending on the capacity of the data collectors.

² Open Data Kit (ODK) is a free and open-source set of tools for mobile data collection solutions. https://opendatakit.org/

answers is then divided by the total of valid answers (ratio). This way a percentage score is obtained for **each patient**.

Example: For infection prevention and control measures we measured five different aspects. For the first patient none of the aspects we measured was relevant, e.g. no examinations were done.

For the second patient only two of the five aspects were relevant: hand washing before and after the examination. Both actions were not observed. Hence this person had two valid answers but did not achieve any score. So the percentage score achieved for this person was 0.

For the third patient all five actions related to infection prevention and control measures were relevant. However, none of the five actions were observed. So the percentage score is yet once more 0.

The fourth patient was examined and instruments were used. Thus three aspects were relevant, but only one aspect (disinfection of instruments) observed. Hence 1 out of 3 were achieved, translating to a percentage score of 33%.

For the fifth patient all five aspects were considered relevant and all were also adhered to by the doctor. Hence for this person a percentage score of 100% was achieved.

The average index **for the facility** for infection and prevention measures would be calculated as 133/4=33%

Patient	Washed hands before	Washed hands after	Disinfected instruments	used gloves as required	used mask as required	Number of valid answers	Number of positive answers	Ratio (positive/valid answers)
1	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a
2	no	no	n/a	n/a	n/a	2	0	0
3	no	no	no	no	no	5	0	0
4	no	no	yes	n/a	n/a	3	1	33
5	yes	yes	yes	yes	yes	5	5	100
						Facil	ity Score	133/4=33

Yes/no: as observed; n/a: action was not needed, e.g. no examination conducted

95% - CI: A 95% confidence interval (CI) is used to analyse the data presented in Tables 15 - 20 whereby the average is a range with an upper and lower number calculated from a sample. Because the true population average is unknown, this range describes possible values that the mean could be. If multiple samples were drawn from the same population and a 95% CI calculated for each sample, we would expect the population mean to be found within 95% of these CIs. CIs are sensitive to variability in the population (spread of values) and sample size. We could say: we are confident that the real value lies somewhere within this value range. A confidence interval cannot be estimated if there is only one observation or if there is no variation of values.

n: number of observations in the sample

Rank: The rank provides an indication on the position of the municipality related to certain aspects. In other words: how does the municipality perform in comparison to the other 37 municipalities. In case of ties (=municipalities achieving the same score) the average rank is calculated and assigned, e.g. achievement scores are for two facilities 90, then their potential ranks 8 and 9 and are taken together and divided by 2. This results in the rank 8.5. Hence there is no rank 8 or 9 assigned and the next municipality would be assigned the rank 10.

2.5 Limitations

Sample size

The study was designed as a nationwide survey. Hence, in comparison to a census, only randomly selected facilities were included in the study. Due to the different sizes of the municipalities, but also the different utilization patterns in the different municipalities, some municipalities had more facilities included than others. Some of the municipalities had only the MFMC and 1 FMC included. This limits our ability to show possible wider variations in these municipalities.

In addition some facilities had only a few visits from patients on the day(s) of the survey. Thus the numbers of observations or exit interviews varies substantially between the facilities.

Interviewer bias

Interviewers were trained and received clear instructions on the data collection, nevertheless variations between interviewers cannot be completely ruled-out.

Clinical observations

The observations protocols for diabetic and hypertensive patients were very detailed in comparison to other illnesses. Hence, this might partially explain achievement differences between those illnesses and all other.

2.6 Ethical considerations

Before the interviews and observations, participants were given an information leaflet and asked for their consent. For this, participants were informed that a) their participation is voluntary, b) they can withdraw from participation at any time without any consequences, c) non-participation will not have any negative effects. Participants were also informed how the data will be used and that confidentiality is ensured as no names or other identifying aspects will be collected.

Ethical clearance was obtained from the Kosovo Medical Chamber on 3rd of August, 2018 (Reference Number: 04/2018).

3 Results

3.1 Summary of results for Shtime municipality

3.1.1 Infrastructure

- Two facilities were part of the study (MFMC, FMC Muzeqinë).
- The MFMC provides a variety of services whilst the FMC Muzeqinë offers more limited health services, e.g. no family planning or child care.
- The overall cleanliness and maintenance were good at both facilities, although the facility infrastructure was much better at the MFMC.
- The FMC experienced electricity shortcuts and had no computer, printer or internet.
- Overall hygiene was very good at the MFMC. However, the FMC had severe deficits, e.g. no safe disposal, storage or collection of sharps or infectious waste or no disinfectants.
- Public accountability items were fully displayed at the FMC Muzeqinë but to a lesser extent at the MFMC.
- Guidelines and information materials were partially available at the MFMC but not at the FMC Muzeginë.
- Many general medical equipment was unavailable at FMC, whereas the MFMC was much better equipped.
- X-ray equipment was not available at either facility.
- Most gynaecological service equipment was available at MFMC, whereas the FMC lacked the majority of them.
- Equipment to assess and monitor child growth was not available at the FMC Muzeqinë and only very limited at the MFMC.

3.1.2 Clinical observation

- In total, 33 clinical observations were conducted (22 at the MFMC, 11 at the FMC Muzeginë).
- The majority (22) of patients presented for other medical issues.
- Six patients consulted for hypertension.
- Adherence to principles of history and physical examination was 81% at the MFMC and 89% at the FMC. This means that across the different patients the doctors adhered to the majority of aspects that were checked, e.g. greeting the patient, seeing the patient in privacy, etc.
- Infection prevention and control was not very satisfactory in either facility. The scores indicate that in cases where infection prevention and control measures were needed, they were often not performed. The confidence interval shows that there was only little variation between the observations concerning the performance.
- Achievement levels on the treatment of hypertensive patients ranged around 40% whereby specifically not all exams were conducted.
- Consultations for reasons other than diabetes or hypertension had substantially higher performance, ranging from 87% at the FMC to 95% at the MFMC.

3.1.3 Exit Interviews

- A total of 17 patients (8 women) were interviewed.
- All patients were either satisfied or very satisfied with the service they had received.
- All patients who had to pay for the service, received receipts.

3.2 Detailed information on results

Facility	MFMC	FMC - Muzeqinë
The facility and immediate surroundings (facility yard, waiting area outside) are free from long grass, paper debris and solid waste.	yes	yes
The facility has a rubbish bin which is properly used and not overflowing.	yes	yes
There is a designated waiting room for patients.	yes	yes
The current waiting area is mopped, free of dust, trash; dirt, spider webs, and generally tidy.	yes	yes
There is at least one designated consulting room for women.	no	no
There is at least one designated consulting room for children.	no	no
All examination room(s) ensure(s) privacy/confidentiality (door, window blind, curtain).	yes	no
All examination rooms are mopped, free of dust, trash; dirt, spider webs, and the rooms are generally tidy.	yes	yes
All examination rooms are well illuminated.	yes	yes
The facility has electricity	yes	yes
During the past 7 working days, did you have any power cuts of more than 1 hour during opening hours.	no	yes
Is there routinely a time of year when this facility has a severe shortage or lack of power?	no	yes
If yes, specify:	not applicable	Vjeshte Dimer
The facility has a functional generator	yes	no
If the health facility has a functional generator: is fuel available today for the generator?	yes	not applicable
The facility has a functional heating system.	yes	yes
If yes, specify:	Lokale me dru	Lokale me dru
Has the facility a functional communication equipment (functional landline telephone or cell phone) available (either private phone or facility phone)?	yes	no
What type of phone do you have available?	Private cell phone of staff, Cell phone of facility	not applicable
The facility has functional computer.	yes	no
The facility has a functional printer.	yes	no
The facility has internet access.	yes	no
During the past 7 working days did you have internet for at least 1 hour every day?	yes	not applicable
The administration shelf is filed and in order.	yes	yes
Does the facility have a patient record system?	yes	yes
In which year was the patient record system introduced?	2000	2005
Are there sufficient empty patient record cards available?	yes	yes

Table 6 Hygiene

	MFMC	FMC - Muzeqinë
There is running water in the facility (out of the tap).	yes	yes
There is warm water available (out of the tap).	yes	no
Is there routinely a time of year when this facility has a severe shortage or lack of water (out of the tap)?	yes	yes
If yes, SPECIFY when:	not applicable	Kur ndalet rryma
If yes: In case there is a severe shortage or lack of water (out of the tap), where do you fetch water?	Bottled water	Bottled water
Functional washing points exist in examination rooms and/or entrance hall, and soap or hand disinfectants and water are available.	yes	yes
Labelled containers for medical waste disposal are available in all required areas (e.g. examination rooms).	yes	yes
The facility has adequate and safe disposal of sharps (sharps box/container).	yes	no
The facility has adequate and safe disposal of infectious waste.	yes	no
Sharps waste is temporary stored at a protected place.	yes	no
There is regular and appropriate collection for infectious waste.	yes	no
There is regular and appropriate collection for sharps waste.	yes	no
The facility has essential disinfectants and antiseptics.	yes	no
The facility has chlorine solution or other disinfectants to disinfect contaminated instruments in all required areas (e.g. in examination rooms).	yes	no
The facility has at least one accessible and functional toilet for patients.	yes	yes
The facility has at least one accessible and functional toilet for staff.	yes	yes
The toilet(s) or latrine is clean.	yes	no
A washing point is available near the toilet or latrine.	yes	yes
Soap and water are available at the washing point near toilet or latrine.	yes	no

Table 12 Availability of equipment to assess and monitor child growth

	MFMC	FMC - Muzeqinë
Box of blocks in different colours	no	no
Rattle, small red ball hung in a piece of thread	no	no
Book with simple illustrations or some sheets of colour paper with illustrations, i.e. a flower, a girl, a car, a cat, etc.	yes	no
Large and thin pencils, sheets of paper for drawings	no	no
Doll	yes	no
Hairbrush	no	no
Small plate and spoon	no	no
Cups	no	no
Simple puzzles with 2-3 pieces	no	no
Sheet with stripes and shapes	no	no

Table 13 Availability of medical products

Facility	MFMC	FMC - Muzeqinë
Vaccines	yes	yes
Water for injections	yes	yes
Atropine sulphate	no	no
Dextrose solution	yes	yes
Manitol solution	yes	no
Diazepam	yes	yes
Adrenaline / epinephrine	yes	yes
Furosemid	yes	yes
Natrium chloride solution	yes	yes
Glyceryl trinitrate/nitroglycerin	yes	yes
Dexamethason	yes	yes
Antitetanus serum	no	no
Antivenom imunoglobulin/antivipera serum	no	no
Oral rehydratation salt/tresol (o.r.s)	yes	no
Benzylpenicillin/ bipenicillin	no	no
Metoclopramide/ methochopramid	yes	yes
Paracetamol/acetaminophen	yes	no
Morphine sulphate	yes	no
Diclofenac	yes	yes
Salbutamol (nebulizer)	yes	yes
Hydrocortisone	yes	no
Contraceptives: oral (COC, POP), Injectables, DIU, Condoms	yes	no
Emergency conceptive pill/levonorgestrel	no	no
Plastic syringes	yes	yes
Needles for syringes	yes	yes
Povidon jod/iodine solution	yes	yes
Surgical gloves	yes	no
Amoxicillin/erythromycin	yes	yes
Chloropiramine/chlorfeniramin (oral antihistamine)	yes	no
Acid acetylsalicylic/aspirin	yes	no
Atenolol/metoprolol	yes	yes
Sol. glucose	yes	yes
Hyoscine butylbromide/buscopan	yes	no
Folic acid	no	no
Oxygen	yes	yes
Bandages	yes	yes
Gauze	yes	yes
Hydrogen peroxide	yes	yes

Facility	MFMC	FMC - Muzeqinë
Hydrophilic cotton	yes	yes
Plastic perfusion system	yes	yes
Spiritus aethylicus 70% (alcohol)	yes	yes
Ranitidine	yes	yes
Magnesium sulphate	no	no
Suture/thread for stitching wounds	yes	no
Kalium (potassium) iodine	no	no
Test strips for Glucometer	yes	no
Urine protein test strips	yes	no
Urine ketones test strips	yes	no
Urine microalbuminuria test strips	yes	no
Fluorescein strips	yes	no
Blood cholesterol assay	yes	no
Lipid profile	no	no
Serum creatinine assay	yes	no

3.2.4 Clinical Observations

Table 14 Clinical observations overview table

	MFMC % (n=22)	FMC - Muzeqinë % (n=11)	
Number of observations (patients)	100%	100%	
- women	59% (13)	73% (8)	
Observations by type of doctors	•	•	
- Family Medical Specialist	45% (10)	0% (0)	
- General Practitioner	55% (12)	100% (11)	
- Other Specialist	0% (0)	0% (0)	
Age of patient			
- <5	14% (3)	9% (1)	
- 5 - 18	32% (7)	0% (0)	
- 19 - 49	18% (4)	36% (4)	
- 50 - 65	14% (3)	27% (3)	
- >65	23% (5)	27% (3)	
Reason for visit	Reason for visit		
- Hypertension	14% (3)	27% (3)	
- Diabetes	0% (0)	0% (0)	
- Other	64% (14)	73% (8)	
-Referral	23% (5)	0% (0)	

Table 15 Adherence to principles of history and physical examination

	MFMC - Shtime (n=22)	FMC - Muzeqinë (n=11)
The medical doctor adheres to principles of history and physical examination, i.e Greets the client Sees the client in privacy/confidentiality Makes the client comfortable (e.g. Seat offered) Asks the client about concerns, allows client to explain his/her health issue Has the patient record Uses the patient record during consultation Documents consultation in patient record (of all who have the patient record) Closed politely the consultation	81% (76% - 85%)	89% (82% - 96%)

Table 16 Infection prevention and control

	MFMC – Shtime (n=22)	FMC - Muzeqinë (n=11)
The medical doctor pays attention to infection prevention and control, i.e - Washes hands before the procedure - Washes hands after procedure - Applied proper decontamination procedures - Puts on gloves where required - Puts on a mask where required	0% (Not available)	7% (0% - 20%)

Table 17 Patients with diabetes

Diabetes	MFMC - Shtime (n=0)	FMC - Muzeqinë (n=0)
The medical doctor		
Asks questions, about Any specific health complaints - General weakness - Urine discharge - Vulvovaginitis or pruritus - Appetite - Eye-sight - Visit to opthalmalogist - Alcohol - Smoking - Using other medicine - Sedentary way of life - Adherence with diabetes treatment (if applicable)	Not applicable	Not applicable
Conducts examinations, i.e - Checks blood pressure - Weight measurement / calculation of body-mass index - Of skin, mucus membranes, nodes of lymph, ears, nose, thyroid glands - Of eyes - Of chest, auscultation of lungs - Auscultation of heart - Of abdomen, palpation of liver and signs of percussion - Perfusion of legs (veins and feeling of legs) - And gives clear explanations to the client concerning the purpose of tests and procedures.	Not applicable	Not applicable

Diabetes	MFMC - Shtime (n=0)	FMC - Muzeqinë (n=0)
Advices, explains and instructs, about Results of examinations The situation and diagnosis The prognosis About needed examinations - Nutrition, i.e. Food intake and weight decrease On the prevention and treatment of hypoglycaemia and other acute and chronic complications of diabetes On self-monitoring - glycemia control and prevention of hypoglycaemia About alcohol About smoking About physical exercise Right ways of care of legs Potential complication of the illness Potential risks if illness is not treated Importance of adherence to treatment About follow-up visit About the referral (if applicable) On prescribed medicines/treatment (if applicable)	Not applicable	Not applicable
Overall Score	Not applicable	Not applicable

Table 18 Patients with hypertension

Hypertension	MFMC - Shtime (n=3)	FMC - Muzeqinë (n=3)
The medical doctor		
Asks questions, about Any specific health complaints - Headache - The use of medicine other than for hypertension - The use of contraceptives - Eye-sight - Visit to ophthalmologist - Alcohol - Smoking - Sedentary way of life - High blood pressure (if applicable) - Adherence with hypertension treatment (if applicable)	42% (13% - 71%)	40% (20% - 60%)
Conducts examinations, i.e - Checks blood pressure - Weight measurement / calculation of body-mass index - Of skin, mucus membranes, nodes of lymph, ears, nose, thyroid glands - Of eyes - Of chest, auscultation of lungs - Auscultation of heart - Of abdomen, palpation of liver and signs of percussion, palpation of kidneys - Perfusion of legs (pulse and perfusion of legs) - And gives clear explanations to the client concerning the purpose of tests and procedures. Checks blood pressure	30% (10% - 49%)	26% (11% - 41%)

Hypertension	MFMC - Shtime (n=3)	FMC - Muzeqinë (n=3)
Advices, explains and instructs, about Results of examinations The situation and diagnosis The prognosis About needed examinations About signs of extreme hypertension About what to do when signs of extreme hypertension occur Nutrition, i.e. food intake About alcohol About smoking About physical exercise About oral contraceptives Potential complication of the illness Potential risks if illness is not treated Importance of adherence to treatment About follow-up visit About the referral (if applicable) On prescribed medicines/treatment (if applicable)	55% (29% - 80%)	42% (27% - 58%)
Overall Score	44% (22% - 67%)	37% (21% - 54%)

Table 19 Patients consulting for other reasons than diabetes or hypertension

Other diseases	MFMC - Shtime (n=14)	FMC – Muzeqinë (n=8)
The medical doctor		
Asks questions, about - Takes patient history (general history, specific to disease) - Asks open ended questions during history taking - Asks about any prescriptions the client is currently taking. - Listens to the client and responds to client questions.	100% (Not available)	97% (91% - 100%)
Conducts examinations, i.e Performs medical examinations and other investigations as individually required Gives clear explanations to the patient concerning the purpose of medical examinations and other investigations.	93% (79% - 100%)	100% (Not available)
Advices, explains and instructs, about Results of examinations The situation and diagnosis The prognosis About needed examinations About follow-up visit About the referral (if applicable) On prescribed medicines/treatment (if applicable) On risks factors/health education (if applicable)	93% (85% - 100%)	78% (54% - 100%)
Overall Score	95% (90% - 100%)	87% (73% - 100%)

Table 20 Patients consulting for referrals

Referrals	MFMC - Shtime (n=5)	FMC - Muzeqinë (n=0)
The medical doctor		
Asks questions, about - Takes patient history (general history, specific to disease) - Asks open ended questions during history taking - Asks about any prescriptions the client is currently taking. - Listens to the client and responds to client questions.	60% (27% - 93%)	Not applicable
Conducts examinations, i.e - Performs medical examinations and other investigations as individually required. - Gives clear explanations to the patient concerning the purpose of medical examinations and other investigations.	100% (not available)	Not applicable
Advices, explains and instructs, about Results of examinations - The situation and diagnosis - The prognosis - About needed examinations - About follow-up visit - About the referral (if applicable) - On prescribed medicines/treatment (if applicable) - On risks factors/health education (if applicable)	55% (32% - 78%)	Not applicable
Overall Score	61% (39% - 83%)	Not applicable

3.2.5 Exit Interviews

Table 21 Socio-demographic attributes among respondents of exit interviews

	MFMC % (n=8)	FMC - Muzeqinë % (n=9)
Number of interviews	100%	100%
- Women	50% (4)	44% (4)
Education	•	
- Never attended school	0% (0)	0% (0)
- Completed lower primary school	38% (3)	22% (2)
- Completed primary school	25% (2)	22% (2)
- Completed high school	25% (2)	33% (3)
- Completed college / university	13% (1)	22% (2)
- Other	0% (0)	0% (0)
Occupation	·	
- Farmer	0% (0)	0% (0)
- Employed	0% (0)	11% (1)
- Self-employed	0% (0)	0% (0)
- Housewife	63% (5)	44% (4)
- Governmental employee	0% (0)	0% (0)
- Unemployed	13% (1)	0% (0)
- Pensioner	25% (2)	44% (4)
- Pupil/Student	0% (0)	0% (0)
- Other	0% (0)	0% (0)
Economic or social aid	0% (0)	33% (3)

Table 22 Frequency and reason of visit of exit interviews

	MFMC % (n=8)	FMC - Muzeqinë % (n=9)
Excluding today: how often did you over the past 3 month access this HC?		
- Did not access this HC in the past 3 months	25% (2)	44% (4)
- 1-3 times	50% (4)	33% (3)
- More than 3 times	25% (2)	22% (2)
What was the reason for your consultation today?		
- Chronic condition	50% (4)	56% (5)
- Antenatal care	0% (0)	0% (0)
- Child health	0% (0)	0% (0)
- Immunisation	0% (0)	0% (0)
- Other	50% (4)	44% (4)

Table 23 Overall satisfaction with health services - exit interviews

	MFMC % (n=8)	FMC - Muzeqinë % (n=9)
Overall: How satisfied were you with the services you received today		
Very unsatisfied	0% (0)	0% (0)
Unsatisfied	0% (0)	0% (0)
Satisfied	75% (6)	89% (8)
Very satisfied	25% (2)	11% (1)

Table 24 Satisfaction with different aspects of health service - exit interviews

	MFMC % (n=8)	FMC - Muzeqinë % (n=9)
Patient was given the opportunity to explain the health problem	100% (8)	100% (9)
Patients privacy was ensured	88% (7)	100% (9)
Doctor explained the questioning and physical examinations and the health problem*	100% (8)	100% (7)
Doctor explained the intake of prescribed medicine**	100% (8)	57% (4)
Doctor asked if patient currently takes prescriptions	100% (8)	78% (7)
Patient was given chance to ask questions about the investigation, health problem and treatment	100% (8)	78% (7)
Doctor listened carefully to patients concerns and questions and gave satisfactory answers	100% (8)	100% (9)
Patient got advice on health problem	75% (6)	44% (4)
Medical doctor was polite during consultation	100% (8)	89% (8)

^{*} relevant only when examination was conducted; ** only relevant if medicine were prescribed

Table 25 Payment for health service - exit interviews

	MFMC % (n=8)	FMC - Muzeqinë % (n=9)
Did you pay today for your health consultation?	38% (3)	56% (5)
Did you get a receipt for your payment?	100% (3)	100% (5)
